

JX

SATELLITES

Recently Triangle Stratos called upon JX to replace their aging 3.7 meter dish looking at Chinasat 6b. The original dish had been there 15 years. The dish was above the building's roof line, about 15 meters above the ground. Dunnett and Dobson (affectionately known as D1 and D2) carried out the installation. The following are some pictures from the day.

First step was to bring down the damaged dish, this was done by lifting it onto the basket while we crouched and lowered it to the ground.

We then lashed the new dish to the front of the basket, Tony rode up in the basket while Peter operated the crane from the ground.

Some precision driving was required to set the dish on it's final resting place

As the dish came closer to it's final resting place, Tony demonstrated just how flexible and acrobatic he can be.

D1 and D2 make checks and final adjustments

The dish is stayed, and final checks completed.
